

ClariQ

Your Company's Private AI Executive.

ClariQ understands your business, analyzes what matters, and gives you the clarity to make better decisions—every single day.

100% Private

Runs on your dedicated Mac. Your data never leaves your business.

Executive Intelligence

Proactive insights, alerts, and recommendations so you can focus on what matters most.

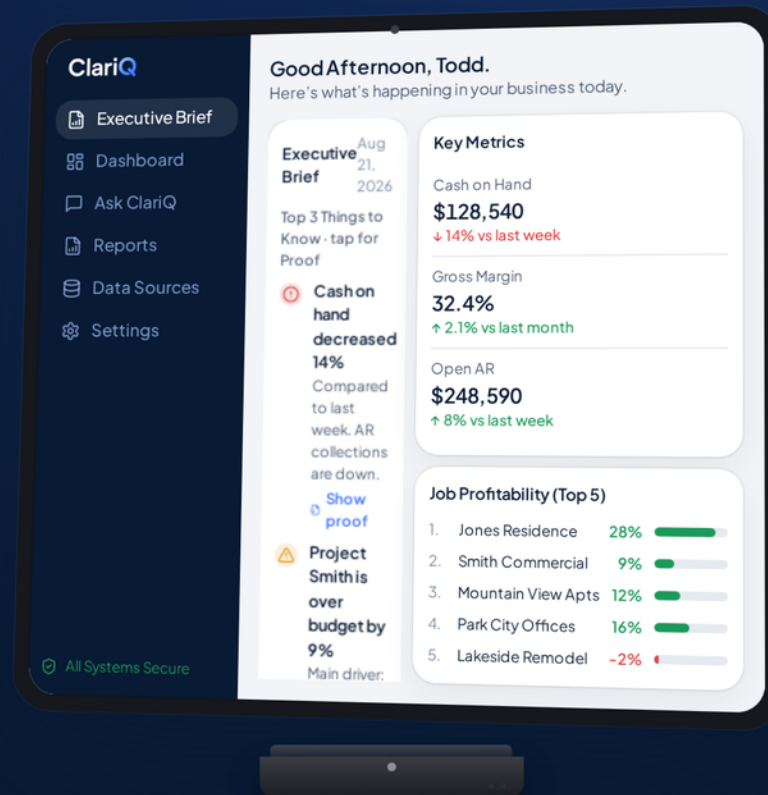

All Your Data. One Picture

Connect QuickBooks, Salesforce, spreadsheets, and documents for a complete view of your business.

Clarity Every Morning. Better Decisions Every Day.

ClariQ works quietly in the background, analyzing your data and delivering an executive briefing that tells you what happened, what matters, and what to do next.

Daily Executive Briefing

Wake up to a clear summary of your business—cash, profit, risks, opportunities, and priorities.

Ask Anything

Ask questions in plain English and get instant answers from all your business data.

Proof

Every recommendation opens the source — invoices, jobs, CRM — then the next action to take.

Proactive Alerts

ClariQ watches your business and notifies you when something needs your attention.

Private by Design

Runs on your hardware, behind your firewall. Your data is never used to train anyone else's AI.

Connect the Tools You Already Use

PROOF

Every recommendation can show its work.

If ClariQ puts something in the executive brief, you can open Proof — the evidence behind the call — and the actions to take next.

01 — RECOMMEND

The brief names what matters

ClariQ flags the call: cash is down 14%, Project Smith is over budget, collections slipped. Not a dashboard dump — a recommendation.

02 — PROOF

Then it shows why

Open Proof to see the source records: QuickBooks cash, Salesforce pipeline notes, the job-cost spreadsheet, the aging invoice. Same numbers. No black box.

03 — ACTION

Then it tells you what to do

Call this customer. Hold this PO. Review this change order. Each action is tied to the proof above it, so you can move today.

Try it on the Mac above — open any item in the executive brief.

How It Works

Connect your tools. Pick your AI. Open Proof on anything that matters.

01

We place a Mac in your office

A dedicated machine, on your network, behind your firewall. It never leaves the building.

02

Connect the tools you already use

QuickBooks, Salesforce, Excel, Sheets, PDFs, Gmail. ClariQ reads them locally and builds one picture of the business.

03

Wake up to a briefing — with Proof

What happened, what matters, and why. Open any recommendation to see the source records, then the action to take.

04

Choose the AI brain

Private open models on the Mac by default. Or, if you choose, Grok, Claude, OpenAI, or Gemini.

YOUR AI BRAIN

Private by default. Your models, your call.

ClariQ is built for privacy: the briefing can run entirely on the Mac in your office. If a company wants a hosted model instead, it can — as an explicit choice, never the default.

ON THE MAC

Open-source, stays private

Weights run locally. Your books never leave the building. Swap brains without changing how ClariQ briefs you.

Llama

Qwen

Mistral

GLM-5.2

NVIDIA Nemotron

OPTIONAL

Hosted brains, if you choose

Some teams want a frontier model. ClariQ can use one — only when you turn it on, with Proof still attached to every recommendation.

Grok

Claude

OpenAI

Gemini

Your Data. Your Business. 100% Private.

Most AI products want your files in their cloud. ClariQ is the opposite: a private executive that never leaves the office — unless you explicitly choose a hosted brain.

Dedicated hardware

ClariQ runs on a Mac that belongs to your office. It is not a shared cloud, and it is not someone else's GPU.

No cloud unless you say so.

Default is local: Qwen, Mistral, GLM-5.2, NVIDIA Nemotron, or Llama on your Mac. Hosted brains (Grok, Claude, OpenAI, Gemini) are opt-in only.

Behind your firewall

Traffic stays on your network. Unplug the machine and the intelligence — and the data — stay with you.

Proof on every call

Sources are listed. Evidence sits next to every number. Open Proof, then take the action — ClariQ shows its work instead of asking for trust.

Built for the people who actually run the business.

Owners, controllers, and ops leads in construction, manufacturing, distribution, and services don't need another dashboard in the cloud. They need a private executive that has read the books, the jobs, and the inbox — and can say, in the morning, what matters.

ClariQ was designed around a simple constraint: privacy first. It ships as a dedicated Mac, sits behind your firewall, and runs open-source models locally. If you want Grok, Claude, OpenAI, or Gemini, you turn that on. Proof still sits on every recommendation.

WHO IT'S FOR

Companies that cannot send job costs or customer files to a public AI.

Operators who want a briefing, not a login to twelve more reports.

Offices that already live in QuickBooks, Salesforce, Excel, and email.
